

Tunisian Society of Acoustics and Vibration

A new Acoustical Society has been created in the Mediterranean basin. The Tunisian acousticians formed the Tunisian Society of Industrial Acoustics and Vibration (ATAVI) <http://www.atavi.org/en/> which, according to the President **Dr Tahar FAKHFAKH** aims to bring together engineers, professionals, researchers and PhD students working or interested in these topics. The targets of the Association are:

- Promote communication and collaboration between international and local communities involved in the fields of activities of the association.
- Organize meeting forums for the benefit of Researchers, Doctors, Scientists, Engineers and Students to share and enrich their ideas and experiences in the field of interest.
- Organize Conferences and Seminars to promote science-based research and encourage meetings between professionals and researchers in the field of interest.
- Cooperate with other similar national and international organizations taking profit from their services to promote exchanges in research fields and serve the community in general.
- Promote Education and research activities oriented to experiments in the fields of engineering, technology and science

The ATAVI will organize the first conference on Industrial Acoustics and vibration C'TAVI in 2016 and the members of the EAA will soon be informed on this event.

The President of the European Acoustics Association sent to the President of the ATAVI the following letter:

Dear Dr. Fakhfakh,

Thank you very much for the information on the creation of the Tunisian Association of Acoustics and Vibration!

On behalf of the European Acoustics Association, I wish you an excellent starting and fruitful continuation of your activities in favor of the science of Acoustics.

The European Acoustics Association is looking forward to an active collaboration with your Association.

Best regards

*Prof. Michael Taroudakis
President of EAA*
