

At the Euronoise conference in Maastricht, the TC Computational Acoustic held its annual meeting. During this meeting, upcoming conferences (Euroregio 2016, ICA 2016, inter.noise 2016 and Forum Acusticum 2017) and possible computational acoustics related sessions were discussed. Still, it is possible to propose sessions for these upcoming conferences. Please contact the chairs of TC Computational Acoustics if you have ideas for this.

The TC Computational Acoustics has launched a platform for benchmark cases in computational acoustics, which can be used by all acousticians working with any kind of computational technique. This platform can be found at <http://ea-bench.mec.tuwien.ac.at/main/>. We kindly invite all of you to collaborate in this initiative. Besides the website, the platform of benchmark cases is described in the following paper: Hornikx, M., Kaltenbacher, M., Marburg, S. "A Platform for Benchmark Cases in Computational Acoustics". Acta Acustica united with Acustica 101(4), 811-820.

Maarten Hornikx, Manfred Kaltenbacher and Steffen Marburg
